Registration To E-Commerce Application

Scenario ID	Scenario Name	Scenario Description (BDD)	Preconditions	Expected Outcome
TS_01	User Account Registration	Given the customer has opened the registration page, When all mandatory information is entered correctly and the Register button is selected, Then a new account should be created successfully, a confirmation message should appear, and an email/OTP verification should be initiated.	User is on the Registration page.	The account is created successfully, confirmation is displayed, and verification Email/OTP is sent.
TS_02	Required Field Validation	Given the registration form is displayed, When the user submits the form by clicking Register without completing the mandatory fields, Then the application should prevent submission and display appropriate validation messages for every required field.	Registration page is accessible.	Validation messages are shown for all mandatory fields and registration is not completed.
TS_03	Existing Email Verification	Given the email address is already associated with an existing account, When the user attempts to Register using the same email address, Then the system should reject the request and display a message indicating that the email is already registered.	An account already exists with the entered email address.	Duplicate email warning is displayed and registration is prevented.
TS_04	Email Format Validation	Given the registration form is available, When the user enters an incorrectly formatted email address (for example, abc.com) and clicks Register , Then the application should notify the user to provide a valid email address before proceeding.	Registration page is open.	An appropriate invalid email validation message is displayed.
TS_05	Password Strength Validation	Given the user enters a password that does not satisfy the password policy, When the Register button is clicked to submit the registration form, Then the application should display the password policy requirements, including minimum length, uppercase letter, lowercase letter, numeric value, and special character requirements.	Registration page is available.	Password policy validation message is displayed and registration is not completed until the password meets all requirements.
